

## Improved Profitability

When you look at the complete picture, Turf Cushion® can also be a game changer for your profitability.

The need for only one lightweight layer to obtain industry leading safety performance, the ease of cutting and shaping and the reduced clean-up all support a more efficient and easier installation process. This allows you to save time, and also get new crew members up to speed quickly. And the turf cushion story is compelling for managers and owners of playgrounds and active artificial turf areas. This translates to more sales and satisfied customers.

## Fast and Easy Installations

Crews using our Turf Cushion® underlay report up to a 25% reduction in installation time.

Our lightweight 4' x 5' sections can be easily carried by all crew members. Only one 2" section is required to achieve HIC/GMAX drop height readings up to 12 feet. This means no stacking is required to achieve industry leading performance and this can reduce handling of sections by 50%. Plus, our precision molded product can be easily shaped without the use of power tools. You can say goodbye to tangled extension cords, expensive power tools and messy cleanup.

## A Sustainable Solution

Turf Cushion® is composed of recycled polyethylene and Eco Raw®, a sustainably-produced sugar cane polyethylene and qualifies for HRC status.

The sugar cane used to produce Eco Raw® is a sustainable resource and results in a carbon neutral polyethylene. At the end of its life cycle, Turf Cushion® is 100% recyclable and can be reclaimed and turned into pellets for making everything from toys to containers to forks.
